Planning of Kitchen

Consumables

This zone is used to store both chilled and unchilled food items. Both the refrigerator and freezer cabinets are a fixed part of this zone.

Non-Consumables

This is the largest storage area in the kitchen. It's used to store items that are used on a daily basis such as utensils, cutlery, dishes and glasses.

Cleaning

This zone gets intensive daily use. It houses the wet and waste disposal areas. The sink, sink cabinet and dishwasher are all located here.

Preparation

This is the main work area of the kitchen and should have the largest work space. Food preparation including cutting, peeling, mixing, and stirring all take place in this zone.

Cooking

This zone is arranged around the stove, oven, microwave and rangehood. It's important for this zone to be next to, or at least close to the Preparation zone.
